

Jabber Video for iPad Setup Instructions

For the iPad, download the Jabber Video for iPad app from the [app store](#), then run through the following directions:

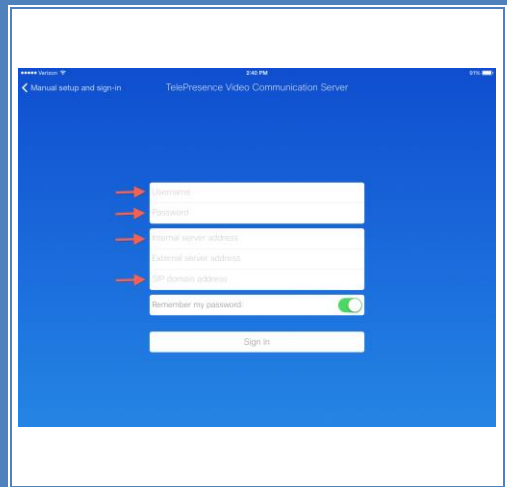

1. The first screen simply asks for a username, so enter an email address. Since the email address (probably) won't be linked to a free Jabber Video account, you'll end up on a "Could not discover..." page with a few server options.

2. Choose the 2nd option on the next screen, TelePresence Video Communication Server (VCS)

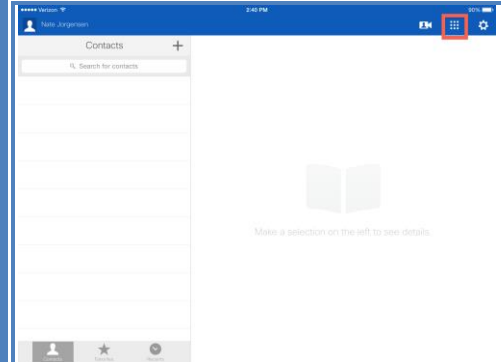

3. Enter the same username and password you usually use for logging into Jabber (these can be re-sent if you don't remember them)
4. Internal server address = `vcscscluster.ics.uwex.edu`
5. External server address = (blank)
6. SIP domain = `ics.uwex.edu`
7. Remember My Password = your choice

Making Calls using Jabber Video for iPad

1. With no contacts or favorites in your lists, choose the 9 dots in the upper-right corner of the screen

2. In the provided screen, start typing a user URI. If the user is also registered, their call information will appear below the Call button.

3. Select the user and either choose to Add to Contacts, or just Call the user.
